

AN APPARATUS HAVING A BOTTOM OPENING POCKET

ABSTRACT OF THE DISCLOSURE

The invention provides a bottom opening pocket that can be attached to an apparatus such as a backpack, a vest, a wheelchair, etc. The bottom opening pocket provides a user with ready access to contents. In one embodiment, the bottom opening pocket includes a flap that opens away from the body so that it can assist in guiding the contents through the opening. Further, a size of the bottom opening pocket can be adjusted and/or additional support can be provided to accommodate items of various sizes and weights.
